

VHF P2P Packet
February 13, 2025

Yesterday I had my Winlink laptop set for P2P Packet, and the following stations connected and sent a P2P message:

KI5RTE
KA9IKK
NZ5TX
WD8RZA
WD8RZA-1
W5WMC
KT5EM
K5LNK

At least twice I heard a VARA auto tune being performed as well as hearing someone attempt a VARA connection. These could have been directed toward either WB5EXI-10 or K5PAS-12 though.

KG5BBF had issues with using P2P but was able to send me a non P2P Winlink message.

At one point W5WMC was trying to connect while WD8RZA-1 was connected and could be why Dave Scott was having issues at first and why W5WMC couldn't connect at that time. Eventually both stations were able to connect directly to KD5YOU at different times.
